

# THE UTILITY OF SARS-COV-2 GENOME SEQUENCING ON THE ION TORRENT GENEXUS PLATFORM

Sixto M. Leal Jr, MD, PhD

Department of Pathology

Division of Laboratory Medicine

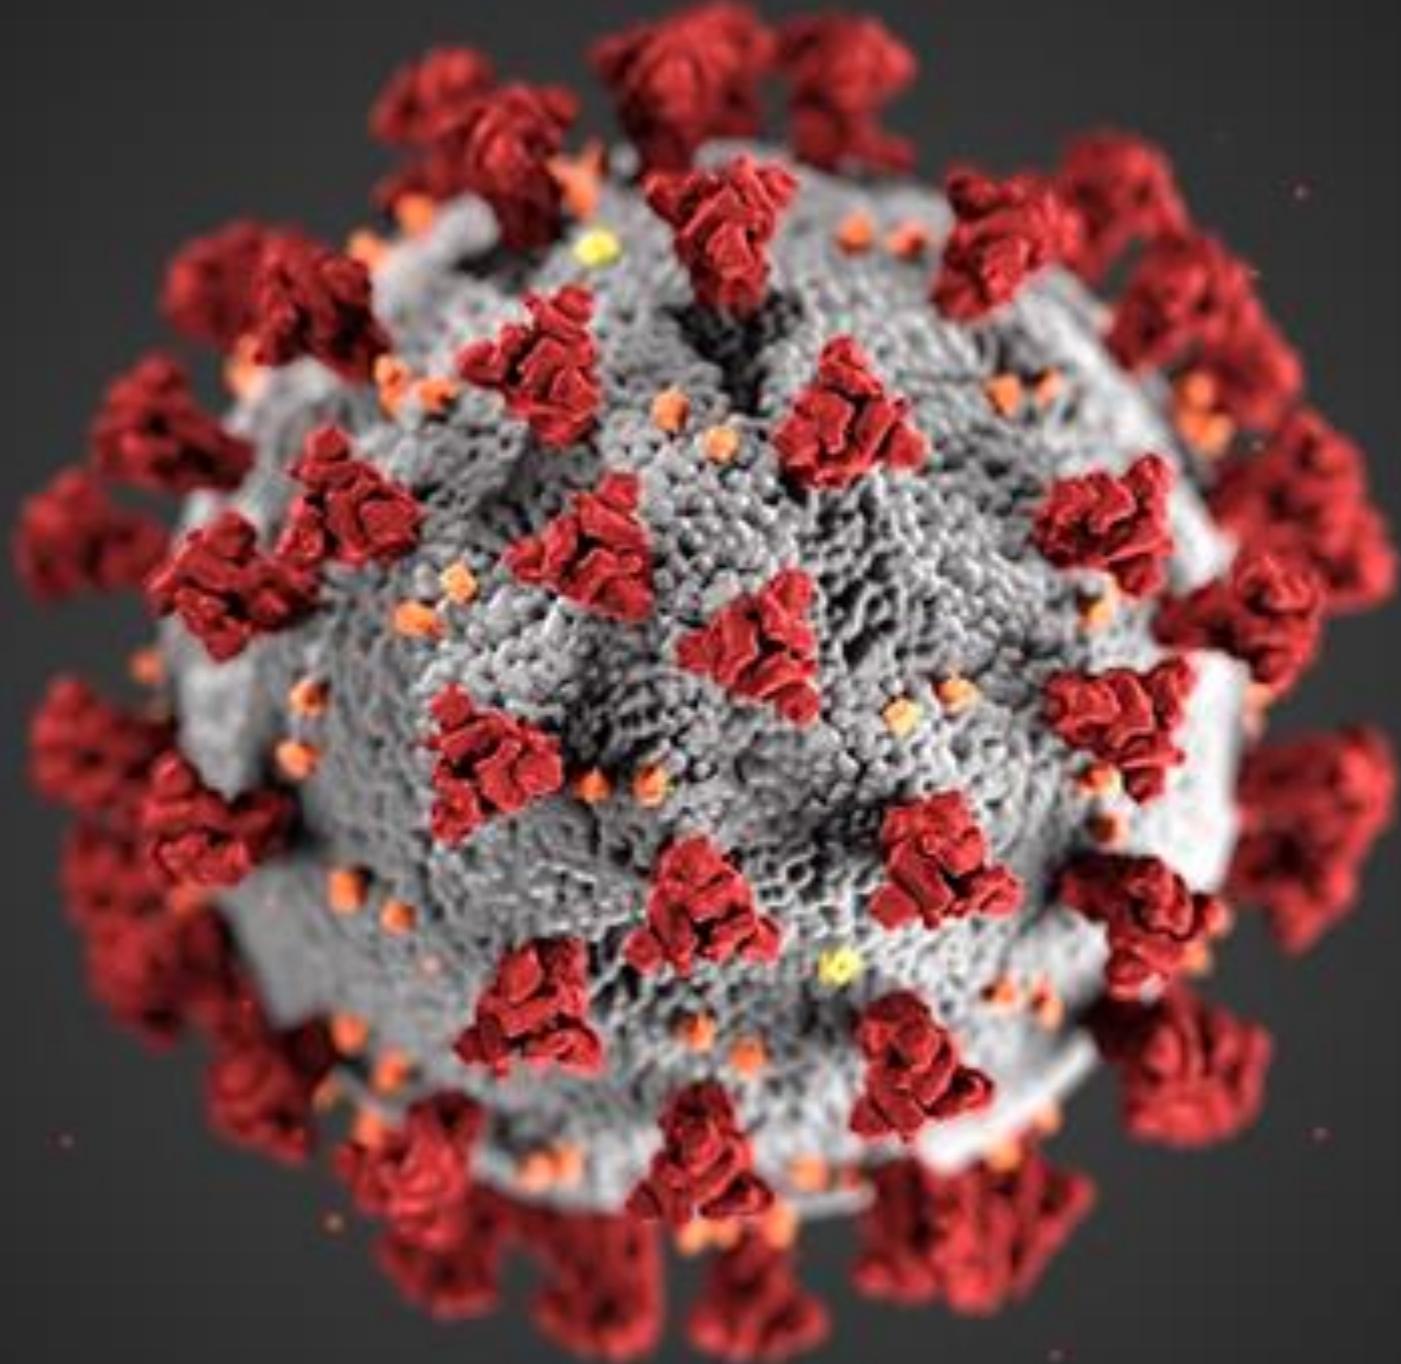

10/07/2021

# DISCLOSURES

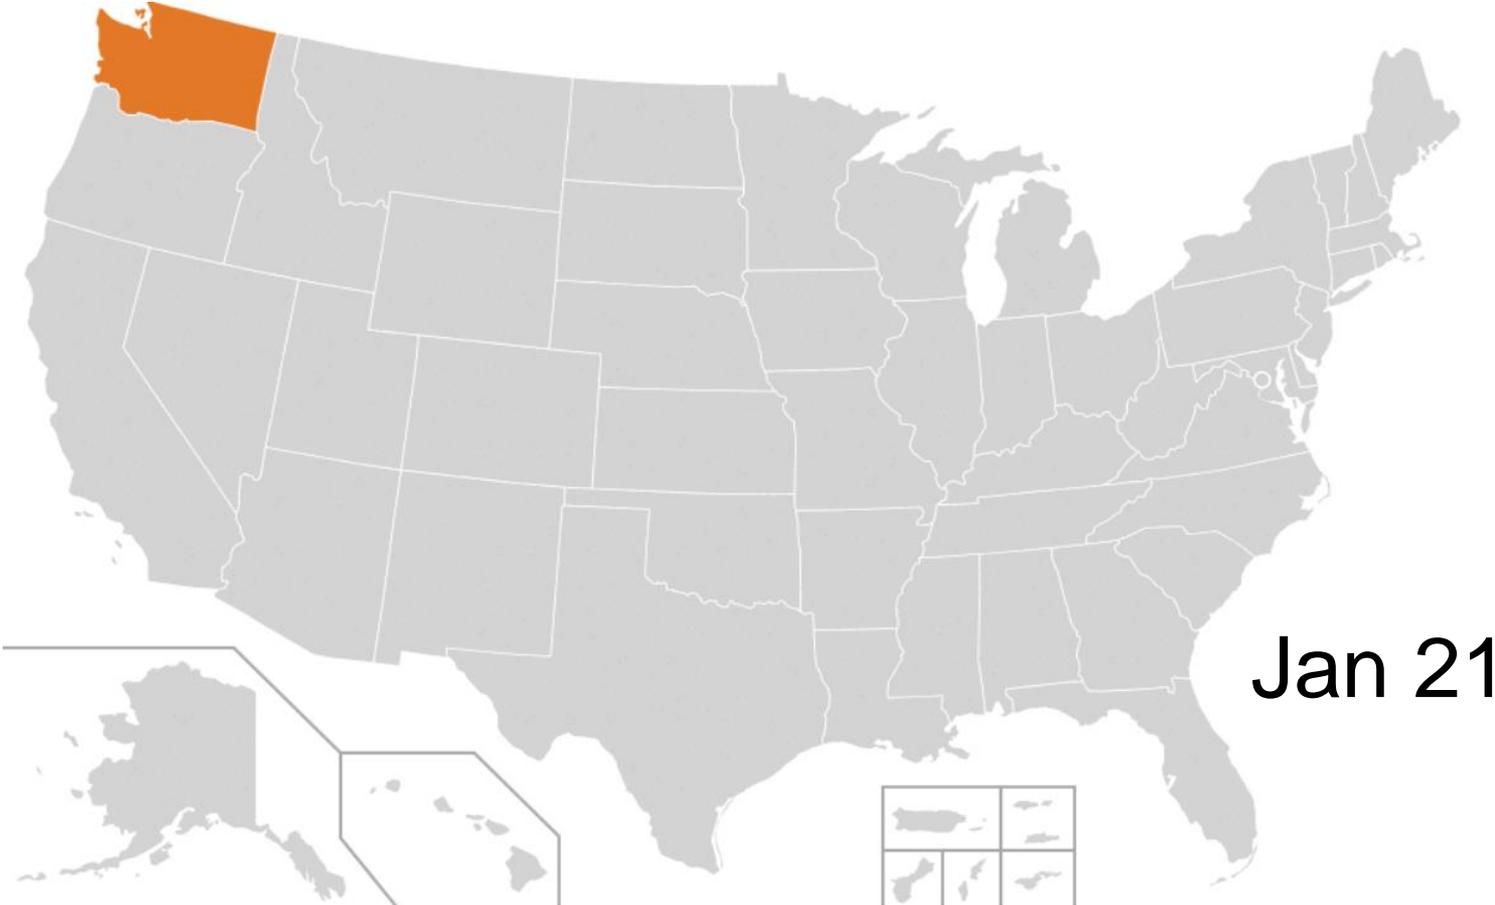

- Principal Investigator on research studies with:
  - Amplyx Pharmaceuticals
  - GenMark Diagnostics
  - CNINE
  - IMMY
  - mFluidX
  - Abnova
  - SpeedX
- Thermo Fisher Scientific and its affiliates are not endorsing, recommending, or promoting any use or application of Thermo Fisher Scientific products presented by third parties during this seminar. Information and materials presented or provided by third parties are provided as-is and without warranty of any kind, including regarding intellectual property rights and reported results. Parties presenting images, text and material represent they have the rights to do so.
- Speaker was provided honorarium by Thermo Fisher Scientific for providing this presentation.

# OBJECTIVES

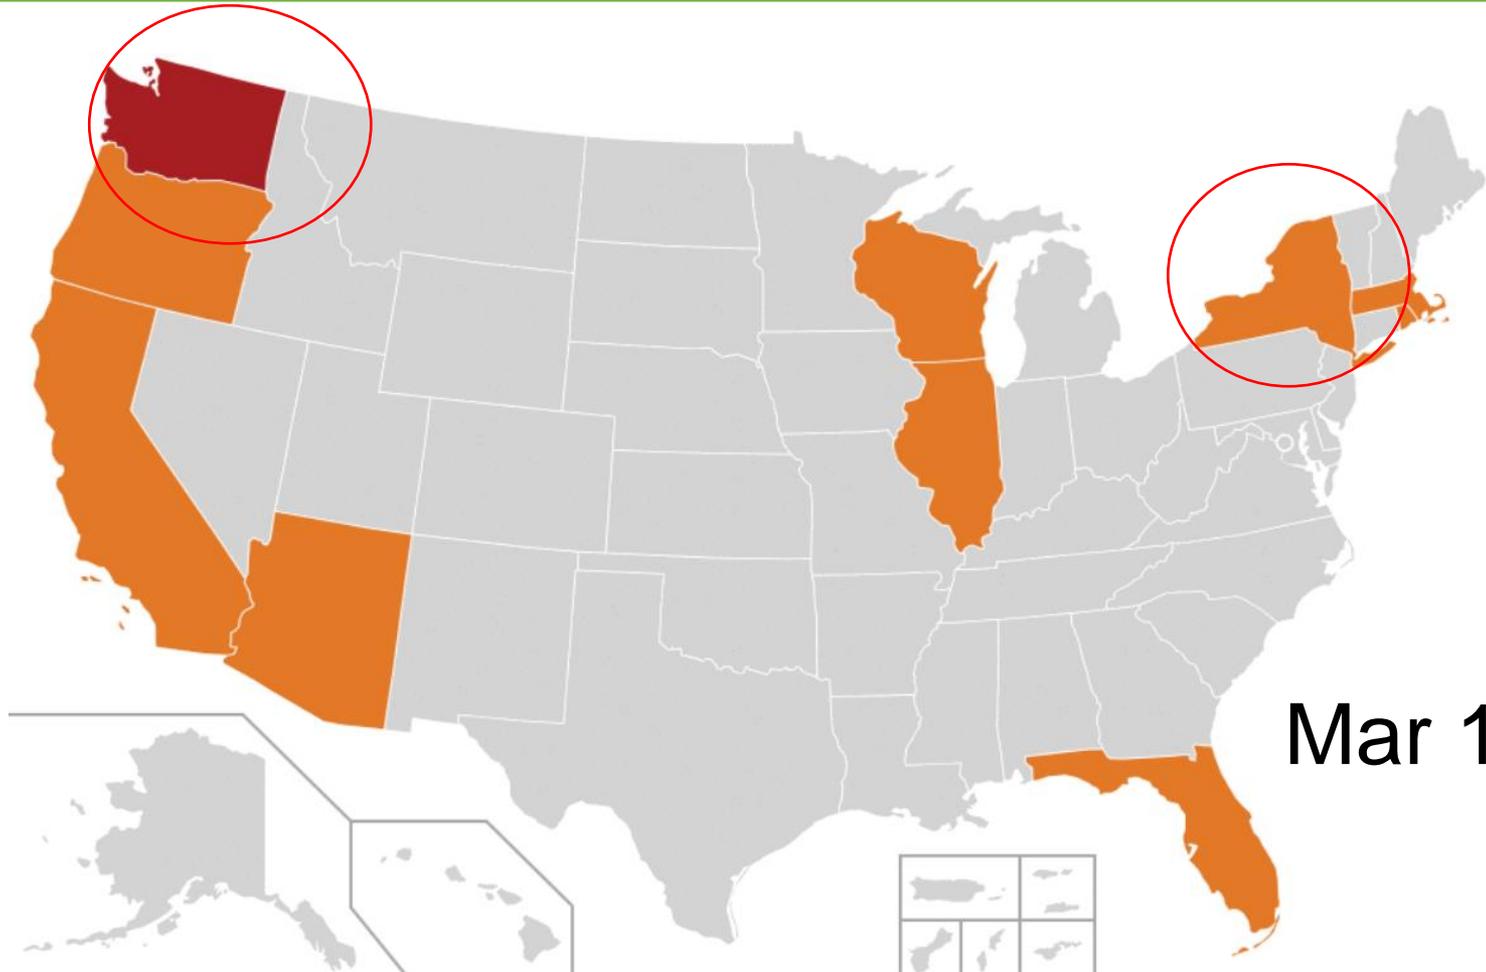

- ❑ Discuss the UAB Fungal Reference Lab COVID-19 experience
- ❑ Introduce the Thermo Fisher Ion Torrent Genexus Sequencing Platform and Ion AmpliSeq SARS-CoV-2 Insight Research Assay
- ❑ Discuss lab implementation/workflow
- ❑ Highlight the impact of our sequencing data on public health

# JANUARY 21 - FIRST CASE OF SARS-COV-2 INFECTION REPORTED IN WASHINGTON STATE

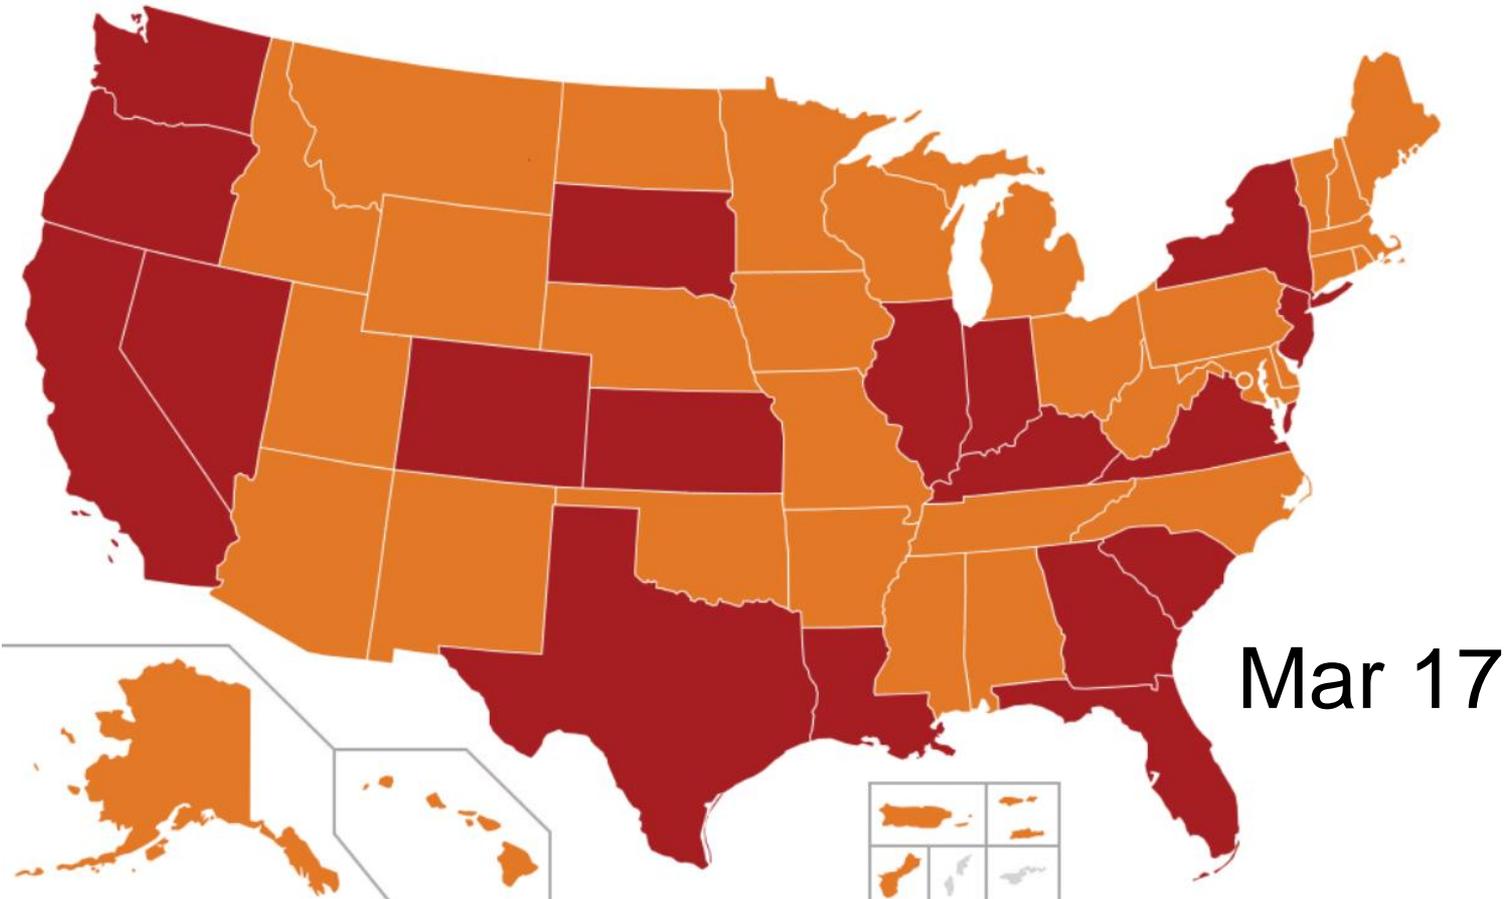

# MARCH 1 - MAJORITY OF COMMERCIAL DIAGNOSTIC TESTS APPROPRIATED TO "HOT SPOTS" (WASHINGTON, NY)

**Commercial tests NOT available. URGENT need to obtain reagents and develop a novel PCR assay**

# MARCH 17 - UAB FRL SARS-COV-2 TEST GOES LIVE

Working with the Division of Infectious Diseases as well as other UAB divisions and departments and coordinated by the CCTS, the IRB has endorsed an Enterprise Research Platform for COVID-19 to shepherd the safe and efficient consent process and collection of specimens and clinical data, which is ongoing. CCTS Informatics, with the Center for Outcomes & Effectiveness Research, Informatics Institute and multiple schools, is coordinating clinical data and longitudinal follow-up for rigorous secondary analysis that ensures efficient and respectful engagement of research participants. This new Enterprise Platform will serve to anchor and enable all COVID-19-related human subjects research across the campus.

#### Enterprise Advantages:

- Recruitment process that protects the safety and health of research teams and patients
- Coordinated strategy for specimen and data collection that respects the good will of the participant
- Consent for longitudinal follow-up, recall and invitation to participate in future studies

## Automate on Genexus Integrated Sequencer

### cDNA synthesis

Initialization, sample dilution, and reverse transcription

### Library preparation

Ion AmpliSeq library preparation and library equalization

### Template preparation

Amplification of library onto Ion Sphere Particles loaded onto GX5 Chip

### Sequencing

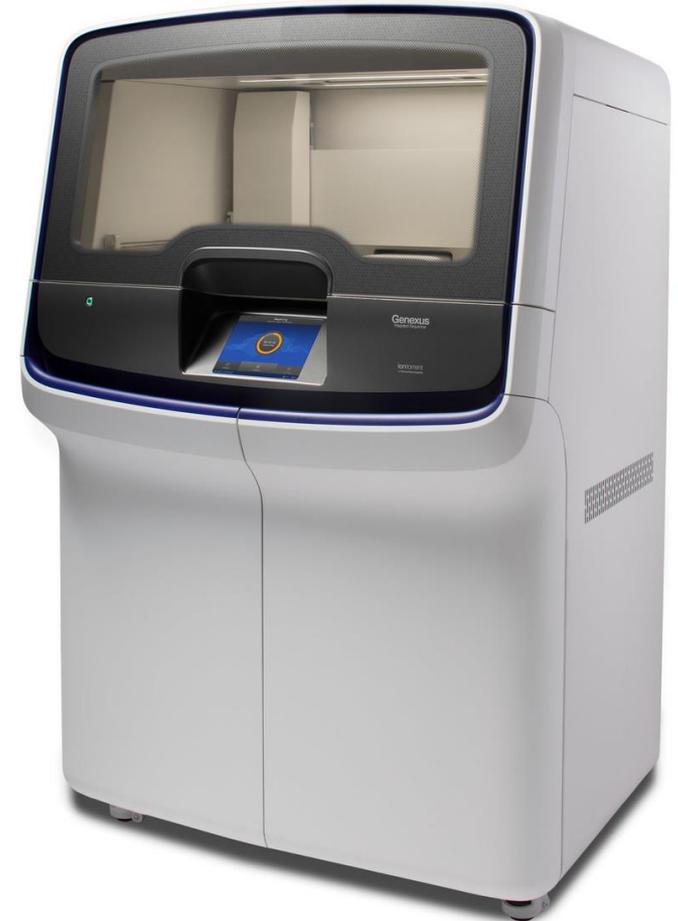

Sequential flows of natural nucleotides measuring incorporation events

### Post-run analysis

1. Log samples
2. Confirm that viral quantity in the sample meets criteria
  1. Cycle threshold  $\leq 30$
3. Extract, Quantify, Dilute RNA
  1. ProMega Maxwell RSC48 system with viral RNA extraction kit
  2. ProMega Quantus fluorometer- measure RNA concentration-
  3. Genexus software assists with sample dilution factors
4. Load RNA in hood into PCR plate
  1. 1<sup>st</sup> 2 columns of plate (n=16)
  2. Seal with aluminum foil
5. Load Genexus system with the following:
  1. Sealed RNA plate
  2. 2 empty PCR plates
  3. Pipette Tips
  4. Consumable reagent strips 1-4
  5. Primer pool tubes
  6. Bar coding nucleotide tubes
  7. Sequencing chip
6. Close lid of system
7. Robotic arm preps reactions
  1. 1 preparation cycle → 16 samples
8. Onboard thermocycler performs PCR
9. Amplicons on beads are loaded into the chip
  1. 1 chip → 32 sequences total

## GenBank Overview

### What is GenBank?

GenBank<sup>®</sup> is the NIH genetic sequence database, an annotated collection of all publicly available DNA sequences (*Nucleic Acids Research*, 2013 Jan;41(D1):D36-42). GenBank is part of the [International Nucleotide Sequence Database Collaboration](#), which comprises the DNA DataBank of Japan (DDBJ), the European Nucleotide Archive (ENA), and GenBank at NCBI. These three organizations exchange data on a daily basis.

# AS OF 9/1, OUR TEAM HAS SEQUENCED A TOTAL OF 890 SAMPLES

Samples Sequenced prior to 9/1: 890

Sequences available within 3-4 days of samples collection

Max Num of Sequences per instrument per month: 320, this assumes that you run 16 samples/run and you complete one run each day Mon-Fri.

## Monthly Breakdown of Samples:

	# Sequenced	# Failed	Total Sequenced	% Successful
Jan	9	1	8	88.89
