

RAPIDComm® Data Management System – Remotely manage multiple CLINITEK Status Connect Systems from a central location

A complete, efficient urinalysis solution from one source:

Why RAPIDComm Data Management System?

Manage data from multiple analyzers in one central location

- Review QC data and generate customized reports
- Query hospital system for patient demographics
- Manage operator data and download operator lists to analyzers

Remotely monitor and control multiple analyzers in multiple locations without physically visiting sites

- Monitor analyzer status and events
- QC lockout – prevent testing if QC regimen is not followed or QC fails
- Perform operator lockout if recertification is overdue
- Automatically recertify operators
- Customizable set-up configuration can be downloaded to all analyzers

How can I effectively manage point-of-care urinalysis testing?

CLINITEK Status Connect System: Flexible connectivity solutions that deliver testing oversight to point-of-care urinalysis

Introducing

the CLINITEK Status Connect System, **your solution**
for better management.

Want testing
oversight and control
of multiple point-of-care urinalysis
analyzers and operators?

CLINITEK Status® Connect System brings connectivity and testing oversight to point-of-care urinalysis for improved risk management

Flexible connectivity facilitates integration of urinalysis testing for improved documentation and billing

Connect to your hospital's LIS/HIS or point-of-care data management software
Store data from multiple testing locations in a central database
Automatically transmit patient data and QC results
Flexible connectivity via serial, ethernet or wireless connection and supports HL7 and POCT1-A2 communication protocol

Advanced operator management provides an additional level of security to improve risk management

Stores up to 700 operator IDs per analyzer
Prevents unauthorized use based on customizable settings
Programmable to grant specific levels of access for each operator
Enter data using optional barcode reader to eliminate manual steps and reduce transcription errors

Expanded Quality Control helps managers and supervisors drive compliance across testing sites

Define specific QC protocols for operators to follow
QC lock-out if protocol is not followed or QC test fails

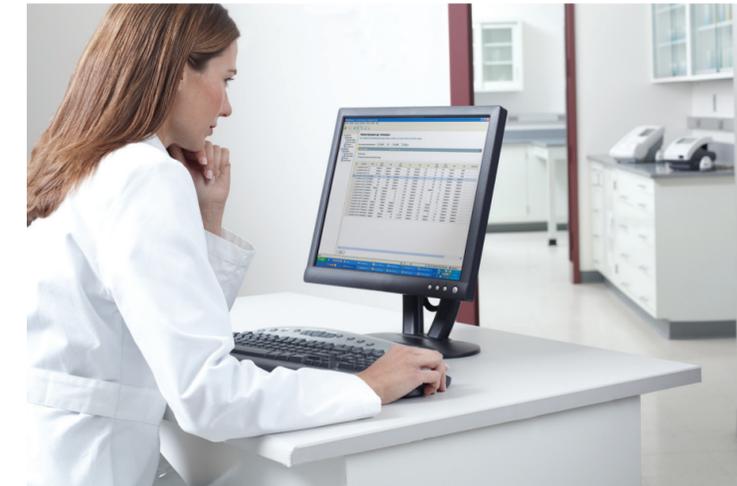

New security features and quality checks improve data accuracy

Checks each strip automatically for humidity to prevent reporting of falsely elevated results (available on strips with leukocyte pad)
Detects common sample interferences in urine and provides printed notation for improved results interpretation* (availability dependent on strip type)

Comprehensive urine test menu – including hCG pregnancy testing

It's about delivering optimal patient care—wherever diagnostic testing is performed—to help maximize efficiency, improve clinical workflows, satisfy compliance requirements, and reduce costs. Achieving these goals means overcoming numerous challenges involved with point-of-care (POC) testing. At Siemens Healthcare, our goal is to help you establish and maintain a healthy POC Ecosystem™ environment—not simply through products, but by implementing integrated solutions.

RAPIDComm Data Management System—Remotely manage multiple CLINITEK Status Connect Systems from a central location.
