NATIONAL FIT TESTING SERVICES

Qualitative Respirator Fit Testing

Qualitative Fit Testing (QLFT) is a pass/fail fit test that assesses the adequacy of respirator fit based on the individual's response to the aerosol test agent.

About

This test may be used for all tight-fitting, negative pressure face pieces that will be used in atmospheres up to 10 times Occupational Safety and Health Administration's (OSHA) Permissible Exposure Limits (PEL). In addition to conducting the fit test, technicians will instruct wearers on all training points, such as donning/doffing, maintenance/storage, and more. Qualitative fit testing is conducted using the test agent Saccharin or Bitrex™ solution aerosol.

Key Benefits

- Efficient and economical
- No off-site travel for the employees
- Assures OSHA compliance
- Assures consistency
